Screen recorder video recorder record editor game

Free screen recorders have come a long way in recent years, and there are now some really impressive tools available that can capture everything that happens on your screen completely for free, and without any frustrating limitations. The best free screen recorder is OBS Studio. A remarkable app with a feature set that rivals those of the more premium tools, it can not only record everything happen on your desktop, but also captures footage of your webcam and uses it for photo-in-photo video, and even record audio from a microphone. It also gives you the option to store the results in a format of your choice, or stream them via the service of your choice. Still, while OBS Studio is definitely an ideal choice for professionals and gamers alike, there are other capable options worth looking at. If you only need to capture a few minutes of visuals, a simpler tool can be everything you need. So, we've rounded up the best free screen recorders for all projects and levels of experience. Whether you're making a software tutorial for your YouTube channel, recording a Let's Play video, or capturing a video call, there's something here that will fit the account. The best free screen recorder right now is: Flashback Pro Flashback Pro offers a much more comprehensive set of tools than the free Flashback Express version listed below, including the ability to edit video and audio frame by frame, add picture-in-photo video and annotations. It's not free like the options below, but if you often need something for professional use, it might be worth the investment. View Deal (Image Credit: OBS Studio Contributors; Shutterstock)The best screen recorder for any software, including gamesIf you are an avid gamer, OBS Studio is easily the best free screen recorder for you. Unlike the hugely popular FRAPS (which lets you only record at a piece for 30 seconds unless you've purchased a license, and apply a watermark to the resulting footage), OBS Studio is open source, and completely free to use without restrictions. OBS Studio supports both streaming and recording in high definition, with no restrictions on the number or length of your creations. You can stream live to Twitch or YouTube game, save projects, and come back to them later, or encode your footage into FLV format and save it locally. Because OBS Studio can record directly from your graphics card, it can capture games running in full-screen mode (many other screen recorders can only record if the game is windowed), with customizable keyboard shortcuts to control the recording. OBS Studio can also make full use of multi-core CPUs for improved performance, and can record at 60FPS (or even higher). It may take a while to set it up exactly how you want, but OBS Studio is by far the best and most powerful screen recorder for gamers. Read our full OBS Studio review (Image Credit: Software; Shutterstock)Ideal for recording games and capturing footage from a webcamOBS webcamOBS is our favorite free screen recorder, but Flashback Express comes a very close second. Despite being a free version of a paid app, FlashBack Express won't post ugly watermarks about your surveys or impose time limits, and it's packed with features and tools that rival a lot of premium apps. The interface is less intimidating than OBS Studio, so if you've never used a screen recorder before, this is an excellent choice. You can record from your entire screen, a window, a selected area, or a webcam. Once you're done, your recording will appear in a simple editor, where you can harvest and trim it to suit your needs and then export them to YouTube, an FTP server, or your computer. It's all pretty standard rate for a free screen recorder, but take a minute to dive into Flashback's advanced options and you'll find a wealth of thoughtfully designed settings that will make your desktop surveys look truly professional. The recorder can automatically obscure on-screen passwords, replace your silly background with an ordinary one, hide messy desktop icons, and emphasize your mouse pointer to make it easier to follow. There's also a dedicated game mode that lets you define the number of frames recorded per second. There's no limit to the length of your surveys unless you choose to set one, which might be useful if there's a chance you could accidentally run the recorder. You can also choose to break long recordings into pieces – a brilliant touch that helps you create large, unrelenting files. Your recordings will not be watered either. Following a recent update, Flashback Express can perform in WMV, AVI and MP4 formats, eliminating the need for a separate video converter, and it no longer requires a free license key for activation – just install the software and you are ready to start recording. Developer Blueberry Software also released a free screen recorder designed specifically for games - FBX. This recorder captures HD-in-game footage, with hardware acceleration for AMD and Nvidia cards, and Intel CPUs.If you think about upgrading to FlashBack Pro, Blueberry software TechRadar readers offer an exclusive 25% discount. Read our full Flashback Express review (Image credit: Apowersoft; Shutterstock)An in-browser recorder more powerful than most desktop apps If you want to record a presentation, software demonstration, or tutorial, give Apowersoft Free Online Screen Recorder a try. This browser-based tool might not be suitable for games, but it's the best free screen recorder for any other tasks. The first time you use Apowersoft Free Online Screen Recorder, you'll be prompted to download a small launcher application. You will then be provided with a control bar packed with more options than you'll find in most desktop screen recording software. You can from your desktop or a webcam, and record audio from your computer, microphone, both or neither. You can record the entire screen, manually select an area, or choose one the predetermined resolutions – ideal if you're recording a clip for YouTube, for example, and don't want to use a separate video editor to change it later. Apowersoft Free Online Screen Recorder also provides customizable keyboard shortcuts for speed and convenience. You can choose whether or not to include the cursor in the survey and take your pick from a variety of output formats, including MP4, WMV, AVI, MOV, and many more. You can even add annotations during the survey. Once you're done, you can save the recording as a video file or GIF, upload it directly to YouTube or Vimeo, or send it to Google Drive or Dropbox. You can also edit the clip. If you choose this option, you'll download an additional component – Apowersoft Video Editor – which allows you to make simple customizations before exporting your video into your preferred format. A truly exceptional tool. Note that the 'Download desktop version' button links to an app called Apowersoft Screen Recorder Pro. This is a trial version of a premium application, and is more limited than Online Screen Recorder.Read our full Apowersoft Free Online Screen Recorder review (Image credit: NCH Software; Shutterstock)Debut Video Capture is a new addition to our roundup of free screen recorders, and although its slightly dated design does so some favors, it's an extremely powerful program that can do much more than just capture what happens on your computer monitor. In addition to basic screen recording (with no time limits or watermarks), Debut Video Capture can also record footage of external devices, including webcams and security cameras. It can even record on a regular schedule, meaning it could become the main hub of a home security system. Not too shabby for an app that's completely free for personal use. There are no post-production editing tools, but you can apply filters and add your own captions and watermarks before you start recording. There's no option to run videos directly to YouTube or Facebook, but they can be stored in all the main formats, including MP4, MOV, and AVI (to name just three). Debut Video Capture is currently in public beta, so we look forward to seeing the final release version with a leak extra polish soon. Read our full Debut Video Survey review (Image Credit: ShareX Team; Shutterstock)A good choice if you want to share your screen recordings onlineShareX is an open source application to still capture screen grabs and recording videos. There are no watermarks or time limits to worry about, but the interface isn't the most intuitive in the world, so you'll be best off using keyboard shortcuts. For quick reference, you can start a recording by typing Shift+Print Screen, and stop it again using Ctrl+Shift+Print Screen.You can also use this free screen recorder to save your capture as a GIF rather than a video file, which can be extremely useful for clicking on forums and media. Not only is ShareX among the best free screen recorders, but it can also capture an entire browsing capture and identify text via OCR, and even capture your screen according to a schedule. Another of its best features is the ability to send your captured rips and videos directly to a file sharing or social media site. There's a huge selection of options, which you can visit on the project's website. Unfortunately, ShareX doesn't support taking screen grabs or recordings of games running in full-screen mode. Other than that, it's an excellent screen recorder that will serve you very well. Read our full ShareX review (Image Credit: Screencast-O-Matic; Shutterstock)A browser-based free screen recorder with plenty to hostScreencast-O-Matic is another browser-based free screen recorder, and a very capable one on it. Recordings are limited to 15 minutes long, but you can record as many tracks as you like, zoom while recording, trim your recorded tracks, add subtitles, save them on your desktop, YouTube or the cloud, share a video link, or add one of 30 royalty-free music clips, addHit 'Start recording for free', followed by 'Launch free recorder', followed by 'Launch free recorder'. As with Apowersoft Free Online Screen Recorder, you'll be asked to download and install a small web launcher, after which the screen recorder will begin. Prepare your screen and adjust the size of the recording window to meet your needs (it can record the entire screen or just a selected area), and then click the red button. You can capture audio from your computer or a microphone, and record footage from your screen, a webcam, or both. Upgrading to a Deluxe account gives you extra features, including scripted recordings, drawings, and annotations, a video editor, and (perhaps most useful) the ability to automatically generate subtitles with text-to-speech. It's an impressive set of tools for \$1.65 (about £1, AU\$2.50) a month, but the free version of Screencast-O-Matic also has plenty to offer. The only real downside is that your surveys will be watermarked unless you upgrade, but if that's not a problem, this free screen recorder is worth watching. See.
